

1.

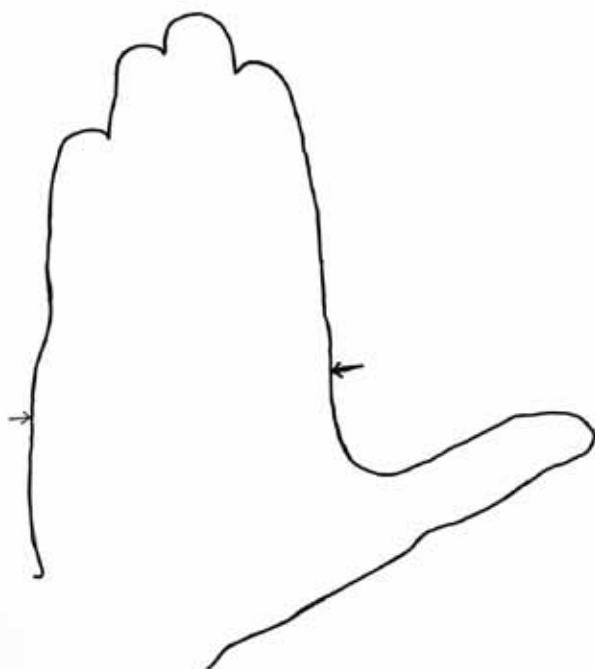

Trace the hand you use to ride with - palm down, **4 fingers together (no space between), with thumb sticking straight out to the side** - on a piece of paper.

2.

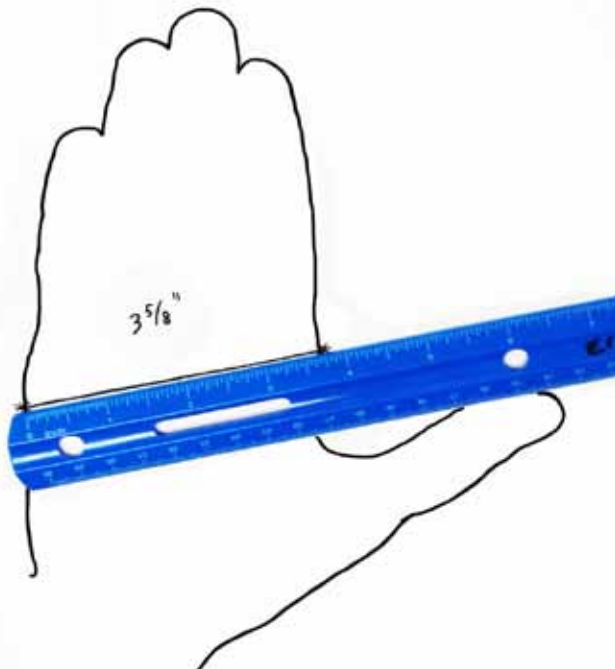

When finished tracing - ***mark the spot on either side of your knuckle area where the knuckle area is at its widest point.***

3.

Take your hand off the tracing, after marking the widest point on each side of your knuckles. Connect the two marks by drawing a line using the straight edge of a ruler.

4.

Measure the line from the first mark to the second. ***Be precise with your measuring as 1/8" will change the size of the glove or rigging size you will need to order.***
