

How to Measure For Rodeo Chaps

1. Waist Measurement

Waist measurement usually refers to the area where the top of chaps are worn.

2. Upper Thigh Measurement

Refers to largest part of thigh.

3. Inseam Measurement

Extends from crotch to floor. We need this measurement to help us insure that your out seam measurement is correct.

4. Outseam Measurement

The most important measurement and the one most commonly mistaken. Measure from where you wear the top of your chaps, (usually the top of the hip bone, although some people wear them higher) all the way to the floor. Make sure you are wearing your riding boots and jeans. This measurement equals entire length of chaps from top waist edge of chaps to bottom edge of fringe.

- You **MUST** have someone other than yourself take the chap measurements. Failure to do so will lead to incorrect outseam and inseam measurements.
- Jeans measurements are **NOT** acceptable. If you try to use jeans measurements your chaps will **NOT** fit.
